

“Tree Care before Wet Season” Webinars

Healthy trees are valuable assets that increase in value over time. As you are aware, trees are living organisms, which will grow and age and change in conditions over time. Trees that are unhealthy or structurally unstable are particularly vulnerable in stormy and rainy weather. To prepare for the upcoming wet season, it is time for us to take proper care of our trees. Webinars on “Tree Care before Wet Season” have also been scheduled for March 2021. Public are invited to attend these webinars. Details are listed in the following table:
