

## **“Let There Be Light”**

by **Mr Ian Robinson**

Director, Oriental Landscaping Ltd.

### Synopsis:

Natural light is crucial for the sustainability of plants but for many Sky Gardens or Refuge Floor landscape schemes this factor appears to be overlooked. This talk looks at just how sensitive are plants and how they respond to the variations in light intensity, duration and quality found in such typical locations. This will also look at suitable species for planting and how best to overcome some of the problems of promoting plant growth in these locations and maintaining them.
